Student Enrollment Process

One of the most requested features from Blackboard 8 was to have the Bb class roster updated in real time to reflect any drop/add requests instead of waiting until the end of the two week period. No longer! The Blackboard 9 class enrollment process is entirely automated, and any changes to your roster should be reflected in the system within only a few minutes after the change officially goes through.

Since the process is entirely automated, students will NOT be able to add themselves to your class. This will eliminate a few problems that occurred in the past with students who wanted to “syllabus shop” and add themselves to a dozen classes to pick which ones they wanted to add after the semester began.
